

Ozone and Carbon Monoxide 1996-98 Air Quality Data Update

The following is a brief summary of EPA's 1998 air quality update for ozone and carbon monoxide nonattainment areas.

Ozone (O_3): Today's list updates ozone air quality monitoring data for the three year period, 1996-98. During this current three year period,

- 36 of the original 98 areas designated nonattainment for the 1-hour O_3 National Ambient Air Quality Standard (NAAQS) in 1991 failed to meet the NAAQS in 1996-98 (Table 1).
- 11 additional counties failed to meet the 1-hour O_3 NAAQS in 1996-98 (Table 2).
- 300 counties have average annual 4th maximum 8-hour daily maximum O_3 concentrations greater than the level of the 8-hour O_3 NAAQS (Table 3).

EPA set the 1-hour O_3 standard at 0.12 parts per million (ppm) daily maximum 1-hour average concentration not to be exceeded more than once per year on average. Compliance with the 1-hour ozone standard is judged on the basis of the most recent three years of ambient air quality monitoring data. The 1-hour ozone standard is not met at a monitoring site if the average number of estimated exceedances of the ozone standard is greater than 1.0 (1.05 rounds up). The level of the 8-hour O_3 NAAQS is 0.08 ppm. The 8-hour O_3 standard is not met if the 3-year average of the annual 4th highest daily maximum 8-hour O_3 concentration is greater than 0.08 ppm (0.085 rounds up).

Carbon Monoxide (CO): Today's list updates CO air quality data for the two year period, 1997-98. During this two year period,

- 3 of the original 42 areas designated nonattainment for the 8-hour CO NAAQS in 1991 failed to meet the CO NAAQS in 1997-98 (Table 4).
- 3 additional areas failed to meet the CO NAAQS in 1997-98 (Table 4).

EPA's National Ambient Air Quality Standard for carbon monoxide is 9 parts per million (ppm) nonoverlapping 8-hour average concentration not to be exceeded more than once per year. The CO standard is not met at a monitoring site if there are two or more exceedances of the level of the CO NAAQS in either of the two most recent calendar years of monitoring data.

Table 1. List of original nonattainment areas not meeting 1-hr ozone NAAQS in 1996-98

State	Nonattainment Area ⁽¹⁾	O ₃ Design Value ⁽²⁾ (ppm)	Avg. Expected Exceedance Rate ⁽³⁾
		1996-98	1996-98

		1996-98	1996-98
DE	Sussex Co NA Area, DE	0.125	1.3
CA	Ventura Co NA Area, CA	0.144	6.4
MD	Washington, DC-MD-VA NA Area	0.129	3.2

Notes:

1. Designations and classifications for ozone nonattainment areas as published in the Federal Register, 40 CFR Part 81. *Unclassified and transitional nonattainment areas are not included in Table 1.*
2. The updated air quality design value is estimated for the 1996-98 period using all air quality data reported to EPA's Aerometric Information Retrieval System (AIRS). The computation procedures follow EPA guidance for calculating design values (Laxton Memorandum, June 18, 1990). For sites with three complete years of monitoring data, the air quality design value is the fourth highest daily maximum 1-hour ozone concentration, because the standard allows one exceedance per year on average. It is important to note that the 1990 Clean Air Act Amendments required that nonattainment areas be classified on the basis of the design value at the time the Amendments were passed, generally the 1987-89 period was used.
3. The level of the 1-hour ozone Ambient Air Quality standard is 0.12 parts per million (ppm) daily maximum 1-hour average concentration not to be exceeded more than once per year on average. The average estimated number of exceedances column shows the number of days the 0.12 ppm 1-hour ozone standard was exceeded on average at the site recording the highest updated air quality value. This computation is performed after adjustment for any missing sampling days during the 3-year period, 1996-98.
4. Special purpose monitoring data not available in AIRS but cited in "FINAL Technical Support Document for the Notice of Final Rulemaking on Finding of Failure to Attain and Denial of Attainment Date Extension for Ozone in the Phoenix (Arizona) Metropolitan Area", October 27, 1997.

Table 2. Additional counties failing to meet the 1-hour ozone NAAQS in 1996-98

State	County (Area)	O ₃ Design Value ⁽¹⁾ (ppm)	Avg. Expected Exceedance Rate ⁽²⁾
		1996-98	1996-98
CA	Amador Co. (adjacent to Sacramento)	0.128	2.5
CA	Calaveras Co. (adjacent to Stockton)	0.130	1.7

TN	Jefferson Co. (adjacent to Knoxville)	0.126	2.0
TX	Gregg Co. (Longview-Marshall)	0.128	2.0

Notes:

1. The updated air quality design value is estimated for the 1996-98 period using all air quality data reported to EPA's Aerometric Information Retrieval System (AIRS). The computation procedures follow EPA guidance for calculating design values (Laxton Memorandum, June 18, 1990). For sites with three complete years of monitoring data, the air quality design value is the fourth highest daily maximum 1-hour ozone concentration, because the standard allows one exceedance per year on average. It is important to note that the 1990 Clean Air Act Amendments required that nonattainment areas be classified on the basis of the design value at the time the Amendments were passed, generally the 1987-89 period was used.
2. The level of the 1-hour ozone Ambient Air Quality standard is 0.12 parts per million (ppm) daily maximum 1-hour average concentration not to be exceeded more than once per year on average. The average estimated number of exceedances column shows the number of days the 0.12 ppm 1-hour ozone standard was exceeded on average at the site recording the highest updated air quality value. This computation is performed after adjustment for any missing sampling days during the 3-year period, 1996-98.
3. An exceedance of the level of the 1-hour ozone standard in 1998, and the possible influence of the Central American fires, is the subject of an ongoing analysis and discussion by Hamilton County, Tennessee and EPA.

	Sheboygan Co	89	Sheboygan, WI

Notes:

** Based on 2 years of data

* Based on 1995-97 data

The level of the 8-hour ozone (O_3) National Ambient Air Quality Standard (NAAQS) is 0.08 parts per million (ppm). The air quality design value for the 8-hour O_3 NAAQS is the 3-year average of the annual 4th highest daily maximum 8-hour

average O₃ concentration. The 8-hour O₃ NAAQS is not met when the 8-hour ozone design value is greater than 0.08 ppm (85 ppb rounds up).

Table 4. Areas not meeting the 8-hour Carbon Monoxide National Ambient Air Quality Standard, 1997-98

Metropolitan Area	1997-98 Design Value ⁽¹⁾ (ppm)	1997		1998	
		2nd Max ⁽²⁾	# Exc ⁽³⁾	2nd Max ⁽²⁾	# Exc ⁽³⁾
Designated CO nonattainment areas					
Fairbanks, AK	12.1	12.1	3	10.2	2
Las Vegas, NV	10.1	8.1	1	10.1	2
Los Angeles-Long Beach, CA	15.0	15.0	12	11.5	13
Additional areas					
Calexico, CA	16.7	16.7	12	13.3	8
Des Moines, IA	10.1	8.1	0	10.1	2
Weirton, WV	13.2	8.8	1	13.2	6
Number of areas not meeting the NAAQS	6		3		6

Notes:

1. The level of the 8-hour National Ambient Air Quality Standard for carbon monoxide is 9 parts per million (ppm) not to be exceeded more than once per year. The design value for the 8-hour CO NAAQS is the highest annual second maximum nonoverlapping 8-hour concentration during the most recent two years.

2. Annual second highest nonoverlapping 8-hour average CO concentration.
3. Number of nonoverlapping exceedances of the 8-hour CO NAAQS.
